

PATIENT INSTRUCTIONS

How to Collect

URINE FOR CHLAMYDIA

1. Patient should not urinate for at least one hour prior to collection.
2. Collect 15 - 20 ml (1/2 oz) of voided urine from the first part of the urine stream (not midstream) to a maximum volume of 60 ml (2 oz).
3. If other urine tests are ordered, use a second container.
4. Refrigerate the sample if you are not delivering it to the lab immediately.
5. Take the specimen to CML HealthCare within 24-hours.

If you have questions, please contact your local CML Healthcare Specimen Collection Centre at:
